Glass

Screen printing mesh for the glass industry.
Screen printing on glass is the preferred printing method for decorative and functional applications in automotive glass, glass for the building industry, household glass, also so-called ‘white goods’ and hollow glassware.

Overview

Function, message, design: Printed glass

Screen printing on glass is a fascinating but also demanding task. What other material is so adaptable and versatile? Precisely because of its great diversity glass requires a practical and efficient printing method for decoration and application of functional elements. Thanks to their high reproducibility and quality, Sefar screen printing meshes give you clear economic advantages. They facilitate and accelerate the production of stencils and optimize the printing process – precisely tailored to your needs and the demanding expectations of your customers. And always including: the expert advice and support of the worldwide Sefar support team.
