

Rotary Pan Filters

Sefar filter covers are suitable for all types of pan filter applications, including tilting pan or screw type filters. Our fabric solutions are adapted to all process conditions, including temperature and chemical resistance.

Product Features

Sefar filter solutions for Rotary Pan Filters

Sefar filter covers are suitable for all common types of rotary pan filters such as tilting pan or screw discharge systems. A wide range of dedicated filter media covers the need of the most common separation tasks performed on rotary pan filters. Sefar filter covers are the material of choice for rotary pan filters. They are suitable for all common types of rotary pan filters such as tilting pan or screw discharge systems. A wide range of dedicated filter media covers the need of the most common separation tasks performed on rotary pan filters and are known to last longer and yield higher results than ordinary filter cloths.

Segment cover

Filter media technology

The SEFAR **TETEX** line comprises a complete range of monofilament, multifilament and mixed mono-/multifilament fabrics.

SEFAR **TETEX** fabrics all have uniformly distributed pores and a smooth surface as a result of special fabric finishing. Monofilament fabrics deliver outstanding filtration results. They do not clog during filtration and can be cleaned easily. Multifilament fabrics are used especially for their ability to retain very fine particles as well as their mechanical resistance. The mixed monofilament and multifilament mesh combine several of their most useful properties.

Monofilament fabric

- For maximum permeability and optimal cleaning

Double-layer fabric

- With filter layer and sturdy supporting fabric
